

Northern California Prostate Cancer Center

Interior tenant improvements including a luxury waiting room, private offices, pathology labs and CT scan room.

2165 S Bascom Avenue
Campbell, CA

From a luxury waiting room and private offices, to the construction of the pathology lab and CT scan room, TEAMWRKX coordinated the intricacies of the medical office ventilation system and safety system standards through its design build team. Project details consisted of a two-phase, fast track project that required a dedicated pre-construction team and partnership between specialist Nelco to ensure the vault and linear accelerator requirements were commissioned appropriately.
